

ELECTRICAL TO DO LIST FOR YOUR BOOTH AT IFEMA

Things to keep in mind before ordering electricity from IFEMA...

Is your stand a shell scheme package ordered through the official supplier?

↳ If so, contact Servis directly for more information on what you have included and if / how to order anything additional to cover your needs.

Servis Exhibitor Services exhibitorservices@servisgroup.es

Is your stand a free-design stand?

Included in your booth floorspace are the following electrical services:

- 130 w of consumption per square meter
- 1 Main electrical connection **ending in a Marechal plug or open points, depending on the wattage. (NOTE: Not a CETAC).**

So, for example a 50m² stand would automatically be provided with:

- 130 w x 50m² = 6500w / 6.5kw
- 1 Main electrical connection

You and/or your stand-builder need to work out if you need to order any additional consumption and main electrical connections.

Above and beyond the minimum, exhibitors can order as much additional electricity as they require.

So, for example, if the same 50m² requires a total of 30kw, divided among 2 main electrical connections, they would need to order and indicate the following:

- Consumption: 30 kw - the 6.5kw min. already included = 23.5 additional kw to be ordered
- Main electrical connections: 2 main connections - the 1 min. connection already included = 1 additional connection to be ordered

IFEMA can also offer you any other electrical services that you may require, such as fuseboards, extension cables, certificates, etc. You can find all these services in the EAGE Exhibitors website.

- For any technical questions you may have before ordering, please contact the IFEMA Technical Secretariat: sectecnica@ifema.es.
- In the case of questions related to rates, contact our IFEMA Exhibitor Care Desk (Servifema): servifema@ifema.es.
- In both cases you can call us at +34 91 722 3000.

IFEMA Certification regulations are very strict and, if don't hire fuseboard+certificate packs from the venue, it is still the exhibitor's / stand-builder's responsibility to ensure that a Spanish-licensed electrician coordinates the Electrical Installation Certificate with the Regional Government of Madrid.

To make life easier, you can purchase just the certificates from IFEMA. Note that almost 100% of foreign stand-builders need to end up hiring the certificate from IFEMA and those that order onsite go to the back of the line so to ensure as few headaches as possible during you build, we suggest you order these ahead of time.

IFEMA needs to know where you want your services installed, so always send us a floorplan of your stand indicating the location of your main connections and required consumption for each connection.

PLEASE NOTE that fuseboards and sockets must always be ordered separately as the provision of the main connections and electrical consumption does not include the installation of fuseboards or any other services.
